AssetGrade Market Summary –

April 2023 Review – Markets Improving While Economy Slows Down

- **Investors enjoyed gains across both equities and fixed income in First Quarter 2023.** International markets, specifically developed market equities as measured by the MSCI EAFE Index outperformed all other asset classes. Warmer weather in Europe coupled with the reopening of China has contributed to the growth overseas.
- After being the best performer by a wide margin in 2022, **only Commodities posted a negative return in the First Quarter 2023.** A slower economy and manufacturing activity has contributed to a slowdown in demand for metal commodities.
- **International equities still look favorable in 2023, as their valuations are cheaper relative to their historical valuations than their US counterparts.**
- **The Federal Reserve raised its benchmark Fed Funds rate to a range of 4.75-5.00%, the highest level in more than 15 years.** If the inflation rate continues to fall, we anticipate the Fed may stop raising rates over the next year.

Why is the Consumer so Important to the Economy?

- **The consumer represents over 67% of GDP and consumer spending is a big driver of economic growth.** Consumer spending was strong the past three years due to the stimulus and unemployment checks. **We anticipate slower economic growth in 2023 due to a slow down in consumer spending.**
- **The consumers' personal savings rate is the difference between disposable income and consumer spending.** The historical average personal savings rate was 8.9%. The personal savings rate fell to 2.4% in 2022, and in First Quarter 2023 it increased to 4.5%. **As consumers save more and pay off their mounting credit card debt, they spend less, which could lead to a slow down in the economy.**
- **The inflation story is getting better.** After inflation peaked in June 2022 at 9.0%, as measured by the Consumer Price Index, **inflation has steadily declined and we anticipate it continuing to decline in 2023.** Rents/shelter remain high, however according to recent surveys the rental crisis is easing as more supply is available.
- **Staying diversified and taking a long-term approach matters.** Many investors felt uneasy during last year's volatile markets. **If you have financial plan that appropriately considers your goals and time horizon, do not overreact to market forces.** Instead, look beyond the short term and focus on the long- term. **If your financial plan and goals have not changed, then stay invested for your future success!**

AssetGrade Market Summary – S&P 500 Valuation Measures

S&P 500 Index: Forward P/E ratio

Source: FactSet, FRB, Refinitiv Datastream, Robert Shiller, Standard & Poor's, Thomson Reuters, J.P. Morgan Asset Management.

Price-to-earnings is price divided by consensus analyst estimates of earnings per share for the next 12 months as provided by IBES since March 1998 and by FactSet since January 2022. Current next 12-months consensus earnings estimates are \$228. Average P/E and standard deviations are calculated using 25 years of history. Shiller's P/E uses trailing 10-years of inflation-adjusted earnings as reported by companies. Dividend yield is calculated as the next 12-months consensus dividend divided by most recent price. Price-to-book ratio is the price divided by book value per share. Price-to-cash flow is price divided by NTM cash flow. EY minus Baa yield is the forward earnings yield (consensus analyst estimates of EPS over the next 12 months divided by price) minus the Moody's Baa seasoned corporate bond yield. Std. dev. over/under-valued is calculated using the average and standard deviation over 25 years for each measure. *P/CF is a 20-year average due to cash flow availability. *Guide to the Markets – U.S.* Data are as of March 31, 2023.

AssetGrade Market Summary – Inflation is Falling

CPI and core CPI

% change vs. prior year, seasonally adjusted

Source: BLS, FactSet, J.P. Morgan Asset Management.

CPI used is CPI-U and values shown are % change vs. one year ago. Core CPI is defined as CPI excluding food and energy prices. The Personal Consumption Expenditure (PCE) deflator employs an evolving chain-weighted basket of consumer expenditures instead of the fixed-weight basket used in CPI calculations.
